

AMENDMENTS TO SPECIFICATION

Please insert the following paragraph in its entirety after paragraph number [24] of the application:

[25] Fig. 5 shows a mode-switching transformer according to an embodiment of the present invention.

Please replace paragraph number [38] of the application with the following paragraph in its entirety:

[38] For example, as shown in Fig. 5, each section 5', 6', 7' and 8' is a plane spiral made in a conductive layer of a multilayer circuit. The two sections of a first line (preferably 5' and 6') are located side by side and connected (connection 11) in the same layer. The two sections 7' and 8' of the other line are respectively interlaced with one of the sections of the first line. Their respective central ends 51, 61, 71 and 81 are electrically connected to the outside of the structure with bridges 52, 62, 72 and 82 made in a second conductive layer (dotted line) connected to the first one by vias, which also realize the ground connection 9.

Please replace paragraph number [39] of the application with the following paragraph in its entirety:

[39] According to a first embodiment, the capacitor C is made external from the spirals, one of its armatures 12 and 13 being made in each conductive layer, and a bridge 62 connecting the end of section 6' which is on the center of one spiral.
